Last time: shortest-path  $\leftarrow$  intuition.

Greedy Alg's key: identify monotonicity.

Shortest path:

# Dynamic Programming.

my Intuition:

Recursive Programs/Algs are often inefficient!

Eliminate the recursion  $\equiv$

Dynamic Programming.

the reverse process of recursion,

# LCS Alg. // longest common subseq.

$\alpha = A A T T T G A T G C C T A$

$\beta = T A A G C T A A C T T A T T A A$

① define subseq. (subseq  $\neq$  substring).

$A T C T$ .

② common subseq. which a subseq of both  $\alpha$  and  $\beta$ .

③  $LCS(\alpha, \beta)$ : a longest common subseq.

Studying the problem helps me design the Alg.

Figure out good properties.

$$\text{LCS}(\alpha, \Lambda) = \Lambda$$

← empty string

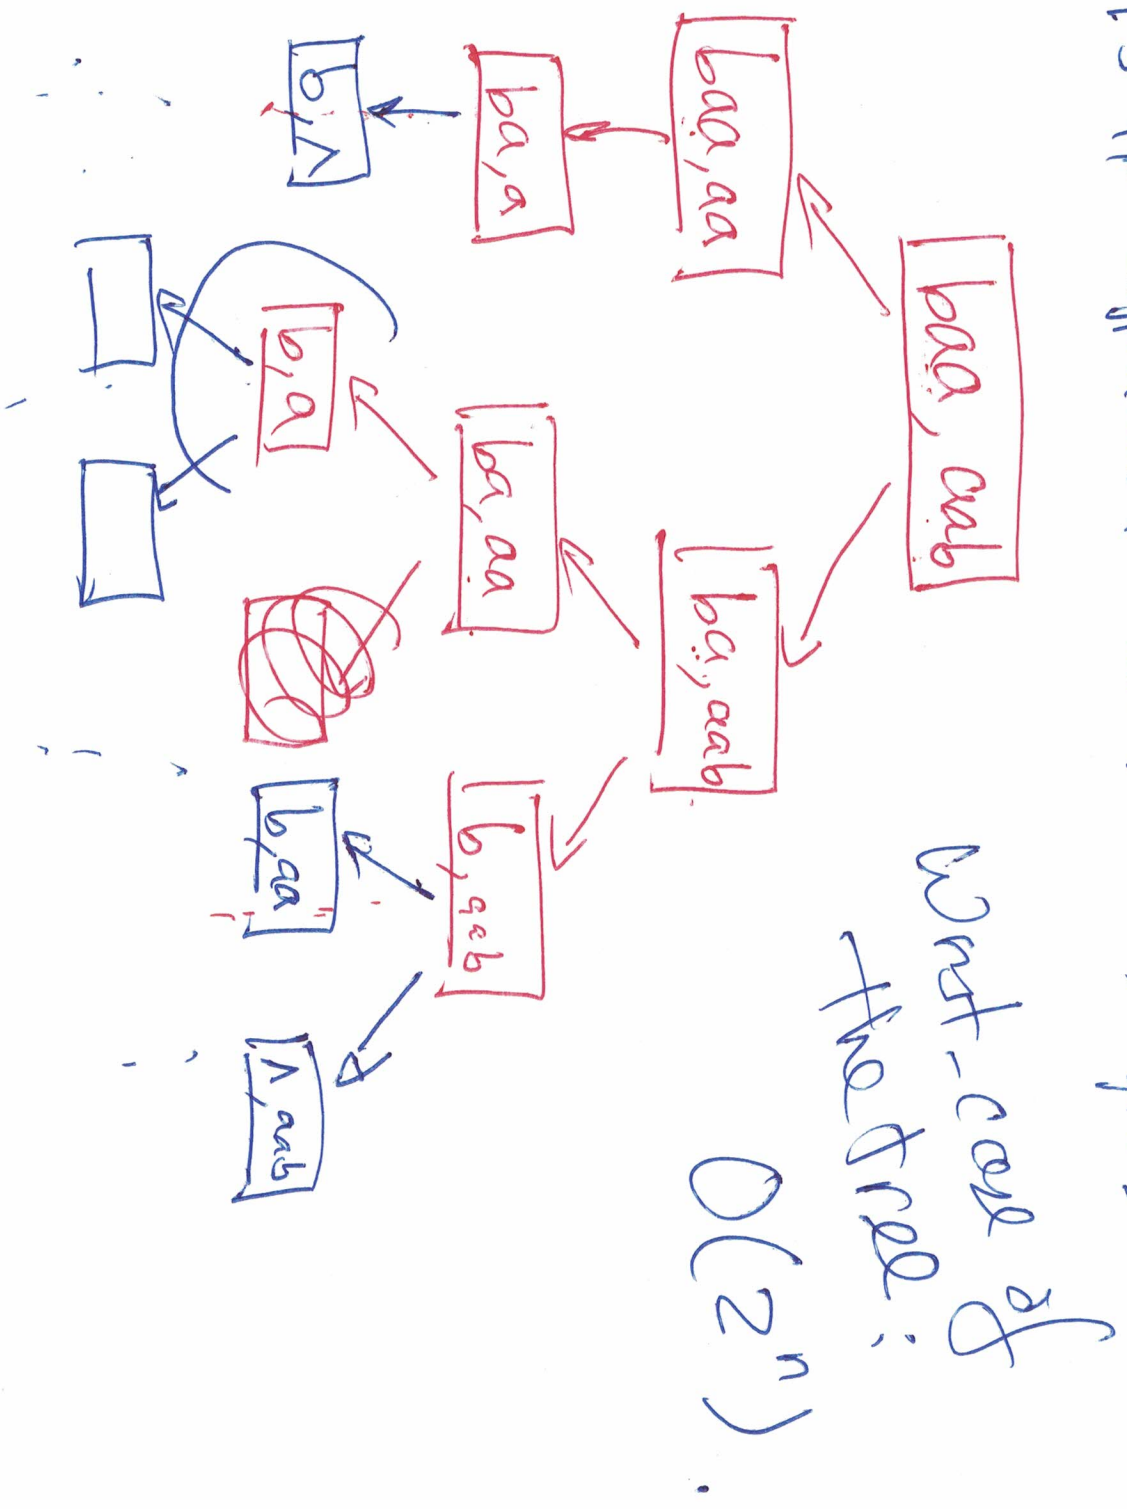

$$\text{LCS}(\Lambda, \beta) = \Lambda$$

$$\text{LCS}(\alpha\alpha, \beta\alpha) = \text{LCS}(\alpha, \beta)\alpha$$

$$\text{LCS}(\alpha\alpha, \beta\beta) = \text{longer of } \text{LCS}(\alpha\alpha, \beta) \text{ and } \text{LCS}(\alpha, \beta\beta),$$

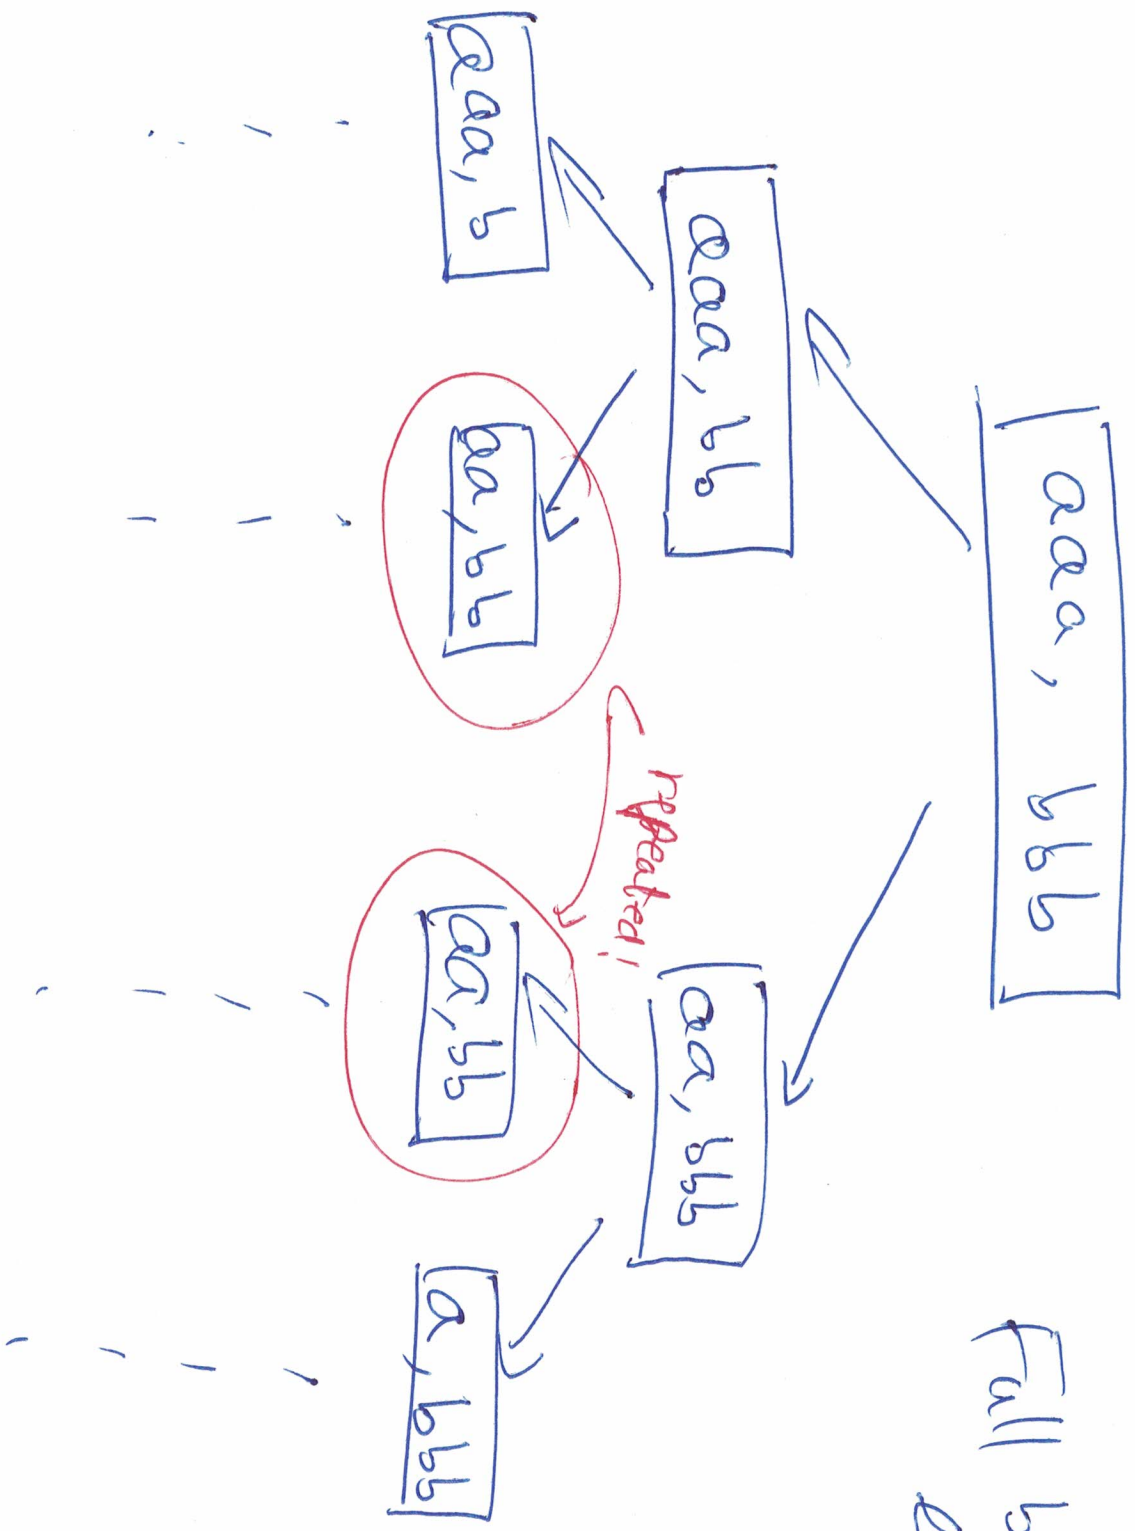

$\alpha \neq \beta$

From the 4 properties, we already have recursion alg. Is it efficient? No. Example:

$$O(2^n)$$

Full binary tree  
example.

# Dynamic programming.

$$\alpha, \beta$$

$$\alpha \alpha, \beta$$

$$\alpha, \beta b$$

$$\alpha \alpha, \beta b$$

act is a LCS.

Greedy.

Dynamic Programming.

Divide & Conquer.

$\log n$ .

$n$

day 1

day 2.

day 3.

day  $x$ :  $\frac{1}{1}$

$$x \approx \log_2 n.$$

- ① Cut the whole problem into two subprobs.
- Solve
- ② ~~Resolve~~ the subproblems separately
- ③ Assemble the solutions into a solution of the whole problem.

<1>: subproblem is easier than whole problem. X

(2). Always cut the whole problem into 2 pieces (Simpler  $> 2$ ) most directly.

(3). Divide & Conquer shouldn't work!

(\*) 
$$T(n) = T(n/2) + T(n/2) + \text{overhead}$$

of assembly.

if  $T(n)$  is linear time.

$$T(n) \sim O(n).$$

Then: (\*) will not give you a  
better time!

if  $T(n)$  is NOT linear, e.g.

$$T(n) \sim O(n^3)$$

~~what you thought of~~

then: From (\*), you can get a  
much smaller  $T(n)$  dep. on  
the overhead.
